- **$4,642.1 million**
  - 25% Asia Pacific
  - 32% Latin America
  - 22% North America
  - 21% Europe, Middle East + Africa

Revenue by Product

- 60% Insecticides
- 27% Herbicides
- 7% Fungicides
- 4% Plant Health
- 2% Other

A Global Workforce

- 6,230 employees
  - 39% Asia Pacific
  - 24% North America
  - 24% Europe, Middle East + Africa
  - 13% Latin America
  - 2% Other
Farmers around the world depend on advanced technologies to protect their crops from disease, weeds and insects. Without new crop protection products, pests build resistance to existing technologies, rendering them less effective and leading to dramatic yield losses.

FMC’s research organization screens more than 60,000 compounds every year to find the right molecules the world has never seen to control destructive pests. During a two- to four-year Discovery phase, we conduct extensive tests on compounds to measure the activity and attributes required for a successful commercial product. Compounds that pass these tests advance to our Development Pipeline, where additional data are generated for regulatory compliance and sustainability assessments. They also undergo further analysis and reviews for crop and formulation assessments, as well as preparations for commercial launch. Research companies like FMC will invest about $260 million over 10 to 13 years* to discover, develop and prepare to commercialize one new synthetic crop protection technology.

FMC sets a high bar in sustainability, with targets that further reduce our environmental footprint, improve our industry-leading safety performance and commit more R&D spending—100 percent—on developing technologies that meet farmers’ needs and are better for the planet.
