

FMC (Shanghai) Agricultural Sciences Company Limited: Water Stewardship Commitment

Water is a critical resource that impacts the health and wellbeing of people globally. FMC recognizes that chemical manufacturing and agriculture are water-intensive industries. We are committed to being good water stewards and managing water resources responsibly in the communities which we live and work. As part of our goal to implement sustainable water practices at all our operating sites, we are focused on using water more efficiently and reducing water consumption in our manufacturing processes. In addition, we continue to make improvements in water management that increase our sites' resiliency during extreme weather events. FMC takes a location-specific approach to water stewardship, implementing projects and best practices that support local communities and watersheds.

As a member of the Alliance for Water Stewardship (AWS), FMC supports the AWS vision for a water-secure world that enables people, cultures, business and nature to prosper, now and in the future. AWS defines water stewardship as the use of water that is socially and culturally equitable, environmentally sustainable and economically beneficial, achieved through a stakeholder-inclusive process that includes both site- and catchment-based actions. In pursuing water stewardship certification at our operating sites, FMC will implement the International Alliance for Water Stewardship Standard (AWS Standard; <https://a4ws.org>), which follows a five-step process intended to achieve five main outcomes:

1. Good water governance
2. Sustainable water balance
3. Good water quality status
4. Important water-related areas
5. Safe water, sanitation and hygiene for all (WASH)

In pursuit of these outcomes, the **FMC Agricultural Sciences Co., Ltd.** manufacturing facility in Shanghai, China assures:

- That the site will implement and disclose progress on water stewardship program(s) to achieve improvements in AWS water stewardship outcomes.
- That the site implementation will be aligned to and in support of existing catchment sustainability plans.
- That the sites stakeholders will be engaged in an open and transparent way.
- That the site will allocate resources to implement the Standard.

FMC recognizes the importance of working collaboratively and transparently to implement the AWS Standard and to understand and address shared water challenges across our global footprint.
